

A photo archive for visual documentation of construction projects

Digital photos form an important basis for the detailed documentation of a construction project. think project! Photo Documentation enables clear archiving of these photos in JPEG, TIFF or GIF file formats. A small preview or 'thumbnail' is created automatically for each image. Additional details, such as 'date taken', 'location taken' and a text description can also be created. All these details are then available as search criteria, making it easier to find the relevant construction site photos quickly.

think project! Photo Documentation also provides comprehensive options for creating photo reports. For example, you can combine all photos taken on a certain date, or that display a specific detail of the construction site, in a single overview.

- **Structured, traceable photo storage**
- **No time-consuming searching for photos stored 'somewhere on a hard drive'**
- **Searchable additional information can be entered for each photo**
- **Comprehensive photo reports**
- **Definable access rights for the photo archive**
- **No size limit when sending via email**
