

## Monitoring construction progress using webcam images

The use of webcams provides a better overview of construction progress and events at a construction site. The think project! Webcam module integrates structured storage of webcam images within project documentation. Any webcam with an email interface can be connected. The time interval between captures is customisable – for example: once a day; once an hour; or at 8:00 am, noon and 4:00 pm. Feeds are transferred automatically by the webcam to think project!, annotated with the date and time and systematically stored. Comments can be added later to any of the images.

- Any webcam technology can be integrated
- Images are transferred automatically to think project!
- The time at which pictures are captured is freely definable
- The date and time are annotated automatically
- Images can be saved together with comments
- Access rights to the webcam images are definable

ID	Picture	comment	Time	Date	webcam name	Document type
1		View to SW	10:00	11/05/2010	stadion camera 1	WEBCAM
2		View to SW	10:00	10/05/2010	stadion camera 1	WEBCAM
3		View to SW	10:00	09/05/2010	stadion camera 1	WEBCAM
4		View to SW	10:00	08/05/2010	stadion camera 1	WEBCAM
5		View to SW	10:00	07/05/2010	stadion camera 1	WEBCAM
6		View to SW	10:00	06/05/2010	stadion camera 1	WEBCAM
